Main

Consultant Decline Information

Consultant Action	Decline
Decline Reason	Reject Referral
Booking Instructions	Following a review of the information in the referral, it has been identified that this young person presents with difficulties, however the DSM-5 criteria outlines that these must be at a significant level at both home and school, causing impairment. In this case, the evidence reviewed by the team does not meet the minimal range of difficulties for an assessment of ADHD to be considered. If this young person's struggles become more evident or new behaviours causing impairment become evident, then please request a new referral to our ADHD service with relevant supporting information.
